

Soil-Cement and Other Construction Practices in Geotechnical Engineering: Proceedings of Sessions of Geo-Denver 2000 : August 5-8, 2000, Denver, Colorado (Geotechnical Special Publication)

This proceedings addresses soil-cement construction procedures and other innovative solutions to geotechnical construction issues. The papers contain overviews of soil-cement construction practice and case studies addressing pile construction, use of post-tension anchors for seismic upgrades, claims issues on a difficult muck excavation project, the relocation of a lighthouse, use of hollow piers for excavation support, and deep excavations in soft soil.
