

# OLED and QLED Displays and Lighting: Materials, Processing and Production (Rsc Smart Materials)

OLEDs (organic light-emitting diodes) are devices which emit light in response to an electric current and are used to produce digital displays such as television screens, computer/laptop monitors and mobile phones. OLED Displays and Lighting is the first fully comprehensive compendium covering all aspects of OLEDs from the fundamentals to the manufacturing of the materials. The book first provides a general introduction to the area, information on the different materials used (small molecules, polymers and dendrimers) as well as their synthesis and characterisation. Further chapters then cover fabrication, processing and manufacturing. Finally the book looks at the current patent status of OLED technology. Written by people who have a direct knowledge of all the issues involved in OLEDs, the book provides a complete picture of the field for advanced undergraduates, post graduates and researchers.
