

Solutions Manual and Computer Programs for Physical and Computational Aspects of Convective Heat Transfer

This book is designed to accompany Physical and Computational Aspects of Convective Heat Transfer by T. Cebeci and P. Bradshaw and contains solutions to the exercises and computer programs for the numerical methods contained in that book. Physical and Computational Aspects of Convective Heat Transfer begins with a thorough discussion of the physical aspects of convective heat transfer and presents in some detail the partial differential equations governing the transport of thermal energy in various types of flows. The book is intended for senior undergraduate and graduate students of aeronautical, chemical, civil and mechanical engineering. It can also serve as a reference for the practitioner.
