

God, Ethics and the Human Genome

Advances in genetic science and medicine over the last few decades raise questions for us all, such as: How far should we intervene in natural processes? How far should we go to alleviate suffering? What constitutes a worthwhile life? What does it mean to be made in the image of God? Exploring these questions and more, *God, Ethics and the Human Genome* aims to equip the Church and individual Christians to engage with theological, ethical and legal issues relating to the human genome. This ground-breaking contribution to the issues surrounding the human genome brings together leading experts and thinkers from a range of disciplines to help the non-expert engage with this vital area in the light of the Christian gospel.
